

Growing Wheat

Science Experiment

Method

1. Put the grains in a bowl and soak in water overnight.
2. Add the cotton wool to the small pot and add a small amount of water.
3. Put a few grains on top of the cotton wool.
4. The grains will sprout in 1-5 days.
5. Once the grains have sprouted, you could transplant them into soil and try to grow wheat plants from them.

You will need:

Wheat grain or wheat berries

Bowl

Small pot

Cotton wool

Water
