

# Year 5 – Summer- Global Warming

## Collaboration

We will work together to find areas in or near the school that are polluted or where waste is dumped. We will think of ways to improve these areas.

## Creativity

We will work as designers apply our knowledge of Global environmental waste and pollution to create a board game for educating others.

**WoW factor: Create a 3-d board game based on environmental issues.**

## Critical Thinking

Think about Global issues of waste and pollution and see if we can find ways to improve this, starting with our own surroundings.

## The World and Me

We will learn about different types of pollution and its effects on our environment.

We will learn about the purpose of different bones and muscles in our bodies, as well as the major organs.

We will learn about ways to keep ourselves healthy.
